

TAKE ADVANTAGE OF THE BENEFITS IN CUSTOM LED RETROFITS

WHY CONSIDER A CUSTOM LED RETROFIT FOR A PROJECT?

The rapid expansion of LED technology has completely changed the way the world sees light. Legacy systems are being updated to take advantage of the energy savings available from LED but you might not want to compromise the aesthetics of the existing design. XtraLight can design and manufacture a custom retrofit solution that will convert an existing fixture to LED.

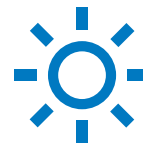

HOW DOES THE DESIGN PROCESS WORK?

- Whether you have an indoor or outdoor fixture that needs to be retrofitted, it's strongly recommend that XtraLight be involved in the quoting process as there are several factors to be determined during design.
- XtraLight requests a sample fixture to design and build around. After design, photometric and thermal testing will be conducted in a third party accredited lab.
- The sample containing the new kit, lab testing and a price quote will be sent back for evaluation. Once approved and a purchase order has been received, manufacturing will begin.
