Each House Side Shield (HSS) has double sided high temperature VHB tape on the back to attach to the optics on your Viento.

1. Remove backing from each piece of VHB tape on the back of the HSS.
2. Carefully place the HSS over the optics in the direction shown below.
   - The arrow on the optic is pointing toward “street side”, or the direction in which the light is being aimed.
   - The open side of each louver on the HSS should be facing the same direction as the arrow.
   - The closed side of the louvers is toward the “house side” of the optics, opposite of the arrow.
3. When the HSS is oriented correctly, press firmly onto the optic.
   - *Please note, as soon as the VHB tape comes in contact with the optic, it will not be able to be removed. Carefully determine correct direction of the louvers before removing tape and pressing in place.*
